

Tommy Triple Presoak

Description

Proper presoak is one of the most important parts of the car wash and applying the proper dilutions of presoak to the customer vehicles is vital. Our Autoprep Arch makes presoaking cars fast and easy while reducing detergent usage thanks to proper targeting of different vehicle areas. The first of three manifolds applies concentrated solution to the front of the vehicle, the second targets to the entire vehicle end-to-end, and the third targets the rear of the vehicle. Meanwhile, a set of one foaming and one non-foaming chemical tire applicators (CTAs) apply concentrated solution to customer tires and wheels.

Specifications

13' wide 11' tall. Required 5' minimum distance from entrance eyes to front end spray to work properly. Requires 5 pumping stations Front end, back end, center ring, Wheel 1, Wheel 2. See Sign & LED requirements for lighting and power requirements.
