

Voice Commander with Enclosure

Part Number: E-E2036

Description: Voice Commander

Site Map: Tommy Store > In the Tunnel > Self Loading Entrance Module

Price: \$1200.00

Detailed Description

The Voice commander has a prerecorded message that plays when triggered by the roller call. Connects to roller call output. The voice commander outputs to a speaker saying "Please place your car in neutral and take your foot off the brake." This component allows customers to load themselves on the conveyor at a higher rate of speed without an employee. This is just another piece of the equation that allows customers to load as high as 180 cars per hour by themselves. This can be done with a combination of components like the Entrance Module and the voice commander. Plugs into 110 volt.

Specifications

Powered with 110v, requires signal trigger from wash controller usually connected to roller call or entrance lights.

Installation

Speaker Connection

- Black - 24V DC (+)
- White - 24 V DC (-)
- Green - Audio Input (T)
- Red - Audio Input (R)
